

	Term	Definition
1	Dinosaur	A group of reptiles that dominated the land for over 160 million years. A variety of species of dinosaurs lived during different eras.
2	Pangea	Supercontinent during the early Mesozoic era, primarily located in the southern hemisphere.
3	Extinct	When a species of animals or plants die out or disappear completely.
4	Fossil	The remains or impression of a prehistoric plant or animal embedded and preserved in rock.
5	Herbivore	An animal that feeds on plants.
6	Carnivore	An animal that feeds on other animals.
7	Omnivore	An animal that eats a variety of food of both plant and animal origins.
8	Reptile	A (normally) cold blooded animal with dry scaly skin, which normally gives birth to young by laying soft shelled eggs on land.
9	Mammal	A warm blooded animal, normally with hair or fur, which typically birth live young and feed them through milk.
11	Warm blooded	Animals which maintain a constant body temperature, normally higher than their surroundings (mainly mammals and birds).
12	Cold blooded	Animals whose body temperature varies depending on its surrounding environment.
13	Paleontologist	A scientist who studies fossils.

Mary Anning was an English fossil collector, dealer, and palaeontologist who became known around the world for important finds she made in Jurassic marine fossil beds in the cliffs
